

Wireless Router Box (WR-BOX)

Cabinets for Organizing Network Components

Oberon's Wireless Router Box is a wall mounted home/office cabinet for conveniently organizing smaller wireless routers and broadband modems. The WR-BOX is made of ABS plastic so it won't attenuate the wireless signal from the wireless router. This 14" x 9" x 4" deep box can be flush mounted by cutting an opening in the wall (or ceiling) and attaching to wall studs, or surface mounted using appropriate wall anchors. The WR-BOX includes two universal electronics brackets with Velcro straps for mounting a wireless router and a broadband modem (or other components). The box's low 4" profile allows the cabinet to be mounted just about anywhere in your home or office.

Oberon WR-BOX shown with wireless router and DSL modem (not included)
